Electrical Power & Energy Systems

Index to Volumes 1 – 8: 1979 – 1986

Author

Abed, E H and Varaiya, P P Nonlinear oscillations in power systems 6.37

Aggarwal, R P, Arumugam, N and Pai, M A Load-flow solution by Newton–Richardson method and its adaptation to optimal load dispatch 2.129

Ahson, S I, Henry, J and Rundhay, D S Microprocessor-based negative sequence relay 8.205

Alexander, J C Oscillatory solutions of a model nonlinear swing equation 8.130

Allam, M F Fast exact state-estimation algorithm based on quadratic equations using sparse matrix inversion 6.79

Allam, M F Generalized state-estimation algorithm using network solvability 2.123

Allam, M F and Alchaly, A A Exact quadratic loan flow algorithm using network reduction and P–V data 7.253

Allam, M F and Rashed, A M H Power system topological error detection and identification 2.201

Amelink, H and Hoffmann, A G Current trends in control centre design 5.205

Anders, G J Modelling operator action to balance the system in probabilistic loadflow computations 4.162

Aoki, F, Akimoto, Y, Uemura, K and Sakaguchi, T Digitalized control system with simultaneous data sampling and fault protection 1.166

Araposthatis, A, Sastry, S and Varaiya, P Analysis of power-flow equation 3.115

Araposthatis, A and Varaiya, P Behaviour of three-node power networks 5.22

Asal, H P Information exchange between control centres in the West European high-voltage grid 5.236

Astakhov, J N, Antonova, N P, Venikov, V A, Lyskov, J I, Postolaty, V M and Tchaly, G V USSR study of electrical transmission lines of increased capacity and reduced ecological influence 3.45

Auge, J, Broussole, F, Le Roy, A and Merlin, A Decision-making tools for real-time control of French EHV power system 5.212

Baburam, A, Balasubramanian, R and Tripathy, S C control of dynamic overvoltages due to load rejection by static shunt compensation 7.29

Backlund, Y and Bubenko, J A Computer-aided distribution system planning 1.35

Bajorek, J Admittance and impedance matrices of multiconductor power cables. Application of Poynting's theorem 7.120

Bajorek, J Transient characteristics of power cables: a new approach based on Poynting's theorem 7.48

Bárcia, P and Baptista, J Computation of steady-state equivalents for electrical networks 5.17

Baumann, R and Bayer, R Databases for power system calculation 4.7

Baumann, R and Wendel, H Calculation of switching combinations in a busbar-switching station with regard to operational constraints 4.211

Bergen, A R, Hill, D J and De Marco, C L Lyapunov function for multimachine power systems with generator flux decay and voltage dependent loads 8.2

Bialek, J Modified algorithm of the revised Simplex method applied to power system state estimation 8.236

Bialek, J Modified power-to-current measurement transformation for power system state estimation 6.195

Binns, D F and Habibollahi, H Overvoltages developed in termination of a transmission line at energization 3.154

Bolzern, P and Fronza, G Role of weather inputs in short-term forecasting of electric load 8.42

Borkowska, B and Przyluski, A Generalized method of network calculations 2.58

Brandão, A F Probability approach to installation studies of power transformers 5.173

Brandwajn, V and Dommel, H W Simulation of turbine generators in electromagnetic transients programs 1.118

Brasca, C, Guardabassi, G, Locatelli, A and Schiavoni, N Optimal decentralized damping of low-frequency oscillations under control energy constraints 3.225

Brown, E P M and Sirisena, H R Fast, optimal state estimation and pseudo-lineflow creation from injection measurements 4.169

Brucoli, M, Maione, B and Torelli, F Synthesis of excitation controllers for synchronous generators setting specified stability margins in the under-excited operating region 7.61

Brucoli, M, Pugliese, P, Torelli, F and Trovato, M Decentralized two-level excitation control of multimachine power systems 6.230

Brucoli, M, Torelli, F and Napoli, R Quadratic probabilistic load flow with linearly modelled dispatch 7.138

Cafaro, G and Margarita, E Method for optimal tearing of electrical networks 4.185

Cafaro, G, Pugliese, P and Vacca, F Parallel solution of torn networks 6.131

Caldon, R and Viaro, U Modelling of electrical power demand characteristics for composite machine-shops 4.137

Čalović, M S and Strezoski, V C Calculation of steady-state load flows incorporating system control effects and consumer self-regulation characteristics 3.65

Caramanis, M, Stremel, J, Fleck, W and Daniel, S Probabilistic production costing: an investigation of alternative algorithms 5.75

Carpentier, J Optimal power flows 1.3

Carpentier, J 'To be or not to be modern' that is the question for automatic generation control (point of view of a utility engineer) 7.81

Carpentier, J and Merlin, A Optimization methods in planning and operation 4.11

Chan, S M Modal controllability and observability of power-system models 6.83

Yang, Q and Morrison, I F Fast digital distance algorithm using FIR filtering 7.243
Zaborsky, J, Ilić-Spong, M and Whang, K W Homogeneous, nonlinear load flow-algorithm for HV-AC and compound HV-ACDC systems 4.233
Zahavi, J Probabilistic simulation incorporating single and multiple hydroelectric units with stochastic energy availabilities 7.229
Zepeda, E A, Price, D H R and Sharp, J A Policy analysis model of a large electrical supply system 5.121
Zieliński, J S and Bruliński, P Transient analysis in a three-phase power line with an application of the method of characteristics 7.13

Title

A bounded-set theoretical approach to reliability modelling and calculations for composite generation-transmission systems including systems with unconventional energy sources **Cheong, H K and Dillon, T S** 1.95
AC-HVDC solution and security assessment using a diakoptical method **El-Amin, I M, Yacamini, R and Brameller, A** 1.175
Accounting for transfer conductance effects in Lyapunov transient stability analysis of a multi-machine power system **Di Caprio, U** 8.27
Admittance and impedance matrices of multiconductor power cables. Application of Poynting's theorem **Bajorek, J** 7.120
Alleviation of a transient stability crisis using shunt braking resistors and series capacitors **Meisel, J, Sen, A and Gilles, M L** 3.25
Analysis of power-flow equation **Araposthatis, A, Sastry, S and Varaiya, P** 3.115
Analytical and computational improvements in performance-index ranking algorithms for networks **Stott, B, Alsac, O and Alvarado, F L** 7.154
A network separation scheme for emergency control **Henner, V E** 2.109
Application of coherency and reduced order models to transient stability studies **Ghafurian, A** 5.145
Application of digital computers to the study of power systems with asynchronized electromechanical frequency converters **Venikov, V A, Zelenokhat, N I, Shakaryan, Y G and Sukhanov, L A** 1.113
Application of distributed and dependable computer systems in power systems **Dillon, T S** 7.67
Application of eigenvalue assignment techniques for damping power frequency oscillations **Papadopoulos, D P and Paraskevopoulos, P N** 7.188
Application of Haar functions for transmission line and transformer differential protection **Fakruddin, D B, Parathasarathy, K, Jenkins, L and Hogg, B W** 6.169
Application of methods and computing programs to system planning. Part 1: Generation system **Manzoni, G, Paris, L, Salvaderi, L and Valtorta, M** 2.147
Application of methods and computing programs to system planning. Part 2: Transmission system **Manzoni, G, Paris, L, Salvaderi, L and Valtorta, M** 2.153
Application of progressive optimality algorithm to optimal hydrothermal scheduling considering deterministic and stochastic data **Nanda, J, Bijwe, P R and Kothari, D P** 8.61
Application of selftuning regulator algorithm to generating to generating unit controllers **Malik, O P, Hope, G S and Sheirah, M A H** 5.159
A probabilistic assessment of transient stability **Kuruganty, P R S and Billinton, R** 2.115
A real-time predictive controller for automatic voltage regulation of a synchronous generator **Lee, K Y and Hossain, S A** 1.181

A simple and reliable procedure for the evaluation of short-term dynamic processes in power systems **Popovic, P** 8.195
Asymptotic stability of large-scale systems with application to power systems: Part 1: Domain estimation **Grujić, Lj T and Ribbens-Pavella, M** 1.151
Asymptotic stability of large-scale systems with application to power systems: Part 2: Transient analysis **Grujić, Lj T, Ribbens-Pavella, M and Bouffioux, A** 1.158
Automatic generation control **Glavitsch, H and Stoffel, J** 2.21
Automatic load shedding in multiarea elastic power systems **Di Caprio, U and Marconato, R** 1.21
Behaviour of three-node power networks **Arapostathis, A and Varaiya, P** 5.22
Calculation of maximum effective current on transmission lines including all harmonics present **Shultz, R D and Smith, R A** 8.115
Calculation of steady-state load flows incorporating system control effects and consumer self-regulation characteristics **Cálović, M S and Strezoski, V C** 3.65
Calculation of switching combinations in a busbar-switching station with regard to operational constraints **Baumann, R and Wendel, H** 4.211
Coherency identification by the method of weak coupling **Lamba, S S and Ram Nath** 7.233
Computation of eddy currents on the alternator output conductors by a finite element method **Vérité, J C** 1.193
Computation of steady-state equivalents for electrical networks **Bárcia, P and Baptista, J** 5.17
Computer-aided distribution system planning **Backlund, Y and Bubenko, J A** 1.35
Computerized interactive model approach to electrical distribution system planning **Gönen, T and Thompson, J C** 6.55
Contingency analysis using dynamic power-system simulation: Part 1 **Handschin, E, Grafoner, P and Grebe, E** 1.107
Control of dynamic overvoltages due to load rejection by static shunt compensation **Baburam, A, Balasubramanian, R and Tripathy, S C** 7.29
Controllable reactive compensation **Reichert, K** 4.51
Convergence analysis of weighted least-squares and fast decoupled weighted least-squares estimation **Sirisena, H R and Brown, E P M** 6.75
Corrective switching: a new dimension in optimal load flow **Koglin, H J and Müller, H** 4.142
Critical review of external network modelling for online security analysis **Wu, F F and Monticelli, A** 5.222
Current trends in control centre design **Amelink, A and Hoffmann, A G** 5.205
Cutset stability criterion for power systems using a structure-preserving model **Chandrashekhar, K S and Hill, D J** 8.146
Damping of subsynchronous oscillations in EHV series-compensated ACDC transmission system **Yadav, R A and Verma, V K** 6.44
Database methods in power system control centres **Lehman, R and Mattioni, J** 5.241
Databases for power system calculation **Baumann, R and Bayer, R** 4.7
Decentralized two-level excitation control of multimachine power systems **Brucoli, M, Pugliese, P, Torelli, F and Trovato, M** 6.230
Decision-making tools for real-time control of French EHV power system **Auge, J, Broussolle, F, Le Roy, A and Merlin, A** 5.212
Decision model of electricity generation planning with an application for Belgium **Verbruggen, A** 7.201
Decomposition multi-stop non-iterative method for the numerical integration of short term and long-term dynamics of power systems **Jovanovic, S M** 8.158
Decomposition techniques in power system planning: the Benders partitioning method **Côté, G and Laughton, M A** 1.57
Derivation of dynamic equivalents for stability analysis **Takeda, S, Nishida, S and Yamaguchi, T** 2.96
Derivation of equivalents for dynamic security assessment **Nishida, S and Takeda, S** 6.15
Design of microprocessor-based control and instrumentation networks **Jervis, P** 1.125
Design of stabilizers by pole assignment with output feedback **Padiya, K R, Prabhu, S S, Pai, M A and Gomathi, K** 2.140
Digital controller design for enhancing steady-state stability of interconnected power systems **Doraiswami, R and Sharaf, A M** 7.210
Digital filter model of power transmission line **Humpage, W D, Wong, K P and Nguyen, T T** 3.197
Digitalized control system with simultaneous data sampling and fault protection **Aoki, F, Akimoto, Y, Uemura, K and Sakaguchi, T** 1.166
Direct method for evaluation of bulk power system reliability. Part 1: Theoretical foundation **Moslehi, K and Wu, F F** 5.3
Direct method for evaluation of bulk power system reliability. Part 2: Solution algorithm **Moslehi, K and Wu, F F** 5.8
Dynamical modelling and control of large-scale systems **Dillon, T S** 4.29
Dynamic equivalents for transient stability studies of electrical power systems **Machowski, J** 7.215
Dynamic insulation in transmission-line design **Rodríquez, A, de la Rosa, R, Wu, C Y, Cheng, T C and Dommel, H W** 6.203
Dynamic model for long-term expansion planning studies of power transmission systems: the Ortie model **Dodu, J C and Merlin, A** 3.2
Dynamic observer-based power system emergency control **Cukalevski, N, Calovic, M and Medanic, J** 8.137
Economic dispatch of active power by quadratic programming using a sparse linear complementary algorithm **Irving, M R and Sterling, M J H** 7.2
Effect of size and location of conventional and intermittent generation on system reliability **Yamayee, Z A and Ma, F S** 5.94
Electrical safety in hazardous environments **Grantham, C** 7.194
Electromechanical distance measure for decomposition of power systems **Pai, M A and Adgaonkar, R P** 6.249
Emergency Control **Di Caprio, U** 4.19
Emergency-state control of slow-speed dynamics **Schweppe, F C, Somuah, C B, Morris, R L and Chan, S M** 3.140
Equivalent transfiguration of networks **Klos, A and Borkowska, B** 1.30
Equivalent turbogenerator model for design of multivariable controllers in multi-machine systems **Osheba, S M and Hogg, B W** 6.89
Estimation of the sensitivity of the electrical energy demand to variations in meteorological conditions: history of methods and development of new approaches at EDF **Ernoult, M, Mattatia, R, Meslier, F and Rabut, P** 5.189
Evaluation of loads in restoration state by the cost of interruption of electrical service **Nara, K, Yamashiro, S and Koike, T** 7.109
Exact quadratic loan flow algorithm using network reduction and P–V data **Allam, M F and Alchaly, A A** 7.253
Excitation control design of local machines in a large-scale power system by using dynamic equivalencing technique **El-Sharkawi, M A and Brewer, B J** 7.165
Excitation control of turbogenerators with output feedback **Papadopoulos, D P** 8.176
Extensions to the bounded-set theoretical approach to reliability modelling and calculations for composite generation–transmission systems using a DC load-flow model **Cheong, H K and Dillon, T S** 2.169
Fast approximate power-flow solution for contingency evaluation **Krishnaparandhama, T and Elangovan, S** 3.215
Flexible computation algorithm for 2nd-order AC load flow with application to ill-conditioned systems **Tamura, Y, Mori, H and Iwamoto, S** 3.179
Fast decoupled state-estimator with linear models **van Meeteren, H P** 1.187
Fast determination of transient stability regions for the second Lyapunov method **Machowski, J** 2.207
Fast digital distance algorithm using FIR filtering **Yang, Q and Morrison, I F** 7.243
Fast exact state-estimation algorithm based on quadratic equations using sparse matrix inversion **Allam, M F** 6.79
Fast, optimal state estimation and pseudo-lineflow creation from injection measurements **Brown, E P M and Sirisena, H R** 4.169
Fault analysis and component schemes for polyphase power systems **Willems, J L** 2.43
Flexible programming approach to security-constrained economic dispatch **Ejebe, G C and Nwodo, T C** 3.91
Framework for power network analysis **Jocić, Lj B, Cretcher, C K and Trygar, T A** 5.182
Generalizing method of network calculations **Borkowska, B and Przyluska, A** 2.58
Generalized state-estimation algorithm using network solvability **Allam, M F** 2.123

General overview of steady-state (small signal) stability in bulk electricity systems: a North American perspective **Dandeno, P L** 4.253
Generation and planning at Électricité de France – a sharper focus for the coming decades **Montfort, B and Lederer, P** 8.75
Hierarchical power system control **Sekine, Y** 7.75
Hierarchical state estimation **Van Cutsem, Th, Horward, J L, Ribbens-Pavella, M and El-Fattah, Y M** 2.70
Homogeneous, nonlinear load flow algorithm for HV-AC and compound HV-ACDC systems **Zaborsky, J, Ilić-Spong, M and Whang, K W** 4.233
Impact of load management and joint ownership of generation of two interconnected systems utilizing joint cumulants and the bivariate Gram–Charlier expansion **Schenk, K F and Ahsan, Q** 7.101
Improved algorithm for optimum reactive power allocation **Thukaram, D, Parthasarathy, K and Prior, D L** 6.72
Improvement of large-scale power systems decomposition-aggregation approach **Shaaban, H and Grujic, L** 8.213
Improvement of transient performance of DWR synchronous generators by coordination of regular parameters **Sarkar, B N, Verma, V K and Mukhopadhyay, P** 3.134
Incorporating explicit loss-of-load probability constraints in mathematical programming models for power system capacity planning **Sanghvi, A P and Shavel, I H** 6.239
Incorporation of method of moments in Wasp-II case study **Schenk, K F, Chan, S and Rau, N S** 3.159
Induction-motor dynamic analysis during power-supply imbalances **Ortmeyer, T H and Mahmoud, A A** 3.220
Information exchange between control centres in the West European high-voltage grid **Asal, H P** 5.236
Information selection method for emergency control of power systems based on team decision theory **Nishida, S** 8.17
Integral approach to the protection of power transformers by means of a microprocessor **Degens, A J and Langedijk, J J M** 7.37
Interactive computer program for planning the expansion of meshed transmission networks **Deschamps, C and Jamoulle, E** 2.103
Interactive stochastic security enhancement algorithm **Ekwue, A O** 6.51
Interconnections **Concordia, C** 3.167
Investigation of the impact of changes in demand forecasting method on the financial performance of an electricity supply undertaking **Price, D H R and Sharp, J A** 7.131
Investigations of the transmission system expansion problem **Ekwue, A O** 6.139
Laboratory verification of an excitation control system for increasing power transfer capability **Liu, C** 5.127
Load-flow solution by Newton–Richardson method and its adaptation to optimal load dispatch **Aggarwal, R P, Arumugam, N and Pai, M A** 2.129
Load-frequency control with disturbance accommodation **Mohadjer, M and Johnson, C D** 6.143
Long-range generation planning: use of optimization- and simulation-based computer programs **Yamayee, Z A** 7.21
Long term expansion planning for hydrothermal electric power systems **Rabensteiner, G** 7.225
Lyapunov function for multimachine power systems with generator flux decay and voltage dependent loads **Bergen, A R, Hill, D J and De Marco, C L** 8.2
Lyapunov stability analysis of a synchronous machine with damping fluxes. Pt I: Extension of the 'equal areas' stability criterion **Di Caprio, U** 8.227
Management decision simulation for electrical utilities **Steiger, F, Handschin, E and Voss, J** 3.97
Markov method for generating capacity reliability evaluation including operating considerations **Singh, C, Asgarpoor, S and Patton, A D** 6.161
Mathematical dynamic optimization model for electrical distribution system planning **Gönen, T and Foote, B L** 4.129
Method for dynamic behaviour control of electric power systems **Iliev, S** 6.212
Method for identifying coherent generators **Krishnaparandhama, T, Elangovan, S and Kuppurajulu, A** 3.85
Method for optimal tearing of electrical networks **Cafaro, G and Margarita, E** 4.185
Method for reducing losses in distribution feeders **Kuppurajulu, A, Elangovan, S, Krishnaparandhama, T and Subramaniam, P** 3.193
Methods of potential network topology description **Nagdy, N M and Rumpel, D** 5.55
Microprocessor-based active and reactive power measurement **Hope, G S, Malik, O P and Chang, J** 3.75
Microprocessor-based negative sequence relay **Ahson, S I, Henry, J and Rundhay, D S** 8.205
Microprocessor-implemented digital filters for inrush current detection **Degens, A J** 4.196
Microprocessors in electric power systems **Sekine, Y, Tamura, Y, Yamaguchi, H, Yamakoshi, Y and Makino, J** 4.62
Midterm stability analysis of a multimachine system by the frequency response method **Suzuki, H *et al.*** 1.16
Minimum variance strategy for load-frequency control **Sheirah, M A, Malik, O P and Hope, G S** 8.120
Modal-based stability analysis of power systems using energy functions **Khorasani, K, Pai, M A and Sauer, P W** 8.11
Modal controllability and observability of power-system models **Chan, S M** 6.83
Modelling of electrical power demand characteristics for composite machine-shops **Caldon, R and Viaro, U** 4.137
Modelling operator action to balance the system in probabilistic load-flow computations **Anders, G J** 4.162
Models and concepts for power system reliability evaluation including protection-system failures **Singh, C and Patton, A D** 2.161
Modified algorithm of the revised Simplex method applied to power system state estimation **Bialek, J** 8.236
Modified power-to-current measurement transformation for power system state estimation **Bialek, J** 6.195
Multimachine stability analysis using vector Lyapunov functions with inertial-centre decomposition **Pai, M A and Vittal, V** 5.139
Multi-time scale analysis applied to long time simulation of power systems **Raghavendra Rao, K, Jenkins, L, Parthasarathy, K and Balasubramanian, R** 7.7
Nonlinear oscillations in power systems **Abed, E H and Varaiya, P P** 6.37
One-step decomposition method for numerical integration of short- and long-term dynamics **Jovanović, S M** 6.3
Operational planning for pumped storage power station using heuristic techniques **Lidgate, D, Ramirez, M, Villaroel, J, Balbas, J A and Hill, J** 4.111
Operational transform technique for generating Lyapunov functions **Guruprasada Rau, V and Krishnamoorthy, N** 6.24
Operational transform technique for generating Lyapunov functions. Pt II: Extension to multimachine power system with flux decay, voltage regulator and speed govenor **Guruprasada Rau, V and Krishnamoorthy, N** 8.223
Optimal connection of controlled HVDC to AC power system **Lukic, V P and Prole, A** 6.150
Optimal decentralized damping of low-frequency oscillations under control energy constraints **Brasca, C, Guardabassi, G, Locatelli, A and Schiavoni, N** 3.225
Optimal observer design for load-frequency control **Yamashita, K and Taniguchi, T** 8.93
Optimal power flows **Carpentier, J** 1.3
Optimal reactive power control via loss minimization and voltage control **Bhatele, R P, Sharma, J D and Thapar, O D** 7.247
Optimal reactive power flow for improved system operations **Fernandes, R A, Happ, H H and Wirgau, K A** 2.133
Optimal thermal mix in electricity grids containing wind power **Martin, B and Diesendorf, M** 4.155
Optimal variable structure controller for the load-frequency control of interconnected hydrothermal power systems **Hsu, Y Y and Chan, W C** 6.221
Optimization methods in planning and operation **Carpentier, J and Merlin, A** 4.11
Optimization of exciter and speed governor control parameters in stabilizing inter-system oscillations with voltage-dependent load characteristics **Tripathy, S C, Rao, N D and Roy, L** 3.127
Oscillatory solutions of a model nonlinear swing equation **Alexander, J C** 8.130
Overvoltages developed in termination of a transmission line at energization **Binns, D F and Habibollahi, H** 3.154
Parallel processing in power systems **Happ, H H** 4.37
Parallel solution of torn networks **Cafaro, G, Pugliese, P and Vacca, F** 6.131
Parameter uncertainty in generating capacity reliability evaluation **Hamoud, G and Billinton, R** 5.149
Pattern recognition in power-system security **Sa Da Costa, J M G and Munro, N** 6.31

Perturbation approach to optimal connection of HVDC to AC power systems **Lukic, V P, Prole, A and Gruber, S** 4.100
Phase coordinate load-flow and fault analysis program **Saleh, A O M and Laughton, M A** 2.193
Phase-shift control of transients in electrical power systems **Cheban, V M, Dolgov, A P, Fishov, A G and Ptushkin, G S** 3.38
Policy analysis model of a large electrical supply system **Zepeda, E A, Price, D H R and Sharp, J A** 5.121
Power and energy systems planning **Laughton, M A** 4.42
Power system computing in ENEL research and development programmes **Quazza, G** 1.65
Power system expansion planning at EDF **Feintuch, P** 5.115
Power system observability and related functions – derivation of appropriate strategies and algorithms **Van Cutsem, Th** 7.175
Power system reliability evaluation **Patton, A D, Ayoub, A K and Singh, C** 1.139
Power system topological error detection and identification **Allam, M F and Rashed, A M H** 2.201
Practical and structural coherency in multimachine power systems **Di Caprio, U** 7.147
Prediction of reserve requirements in generation planning **Côté, G and Laughton, M A** 2.87
Probabilistic flows for reliability evaluation of multiarea power system interconnections **Clancy, D P, Gross, G and Wu, F F** 5.101
Probabilistic production costing: an investigation of alternative algorithms **Caramanis, M, Stremel, J, Fleck, W and Daniel, S** 5.75
Probabilistic production cost model for a power system with storage **Nassar, M and Gruber, S** 5.87
Probabilistic simulation incorporating single and multiple hydroelectric units with stochastic energy availabilities **Zahavi, J** 7.229
Probability approach to installation studies of power transformers **Brandão, A F** 5.173
Production costs evaluation of two interconnected electric power systems by the segmentation method **Schenk, K F, Ahsan, Q and Vassos, S** 8.168
Quadratic probabilistic load flow with linearly modelled dispatch **Brucoli, M, Torelli, F and Napoli, R** 7.138
Qualitative analysis of mathematical arc models using Lyapunov theory **Genesio, R, Vicino, A and Tartaglia, M** 4.245
Quasi-Newton method for optimal power flows **Giras, T C and Talukdar, S N** 3.59
Reactive power–voltage problem: conditions for the existence of solution and localized disturbance propagation **Thorp, J, Schulz, D and Ilić-Spong, M** 8.66
Recent advances in digital protection **Sekine, Y, Hatata, M and Yoshida, T** 6.181
Recent improvement of the Mexico model for probabilistic planning studies **Dodu, J C and Merlin, A** 1.46
Research and development in power system computation in the FRG **Edwin, K W** 1.199
Results of tests on microprocessor-based voltage and speed regulators carried out on a large physical model complex **Malik, O P, Hope, G S, Gorski, Ju M and Ushakov, V A** 5.61
Role of weather inputs in short-term forecasting of electric load **Bolzern, P and Fronza, G** 8.42
Second-order, 3-phase load flow **Roy, L and Mohan Rao, S R** 3.50
Sensitivity studies of the power-line carrier channel with respect to the parameters of the coupling equipment **Indulkar, C S, Kumar, P and Kothari, D P** 6.67
Sensitivity study of an untransposed overhead transmission line **Indulkar, C S, Kumar, P and Kothari, D P** 4.265
Short-term forecasting of grid load using Box–Jenkins techniques **Vähäkylä, P, Hakonen, E and Léman, P** 2.29
Simple quasioptimal control of excitation for stabilization of multimachine power system **Rahim, A H M A, El-Amin, I M and Kelly, D H** 3.208
Simplified models of turbogenerators for power system stability studies: an approach to parameter identification **Delfino, B and Denegri, G B** 3.17
Simulation of turbine generators in electromagnetic transients programs **Brandwajn, V and Dommel, H W** 1.118
Starting algorithm and modification for Newton–Raphson load-flow method **Hubbi, W and Refsum, A** 5.166
State estimation by orthogonalization and splitting **Wallach, Y and Handschin, E** 4.177
State of the art of use of computer aids for decision-making in control centres **Merlin, A** 3.103
Static state estimation with DC models and linear programming **Graven, J H and Van Amerongen, R A M** 8.241
Status of power-system research at ENEL **Di Caprio, U** 6.112
Steady-state modelling of six-phase (multiphase) transmission systems **Tiwari, S N and Singh, L P** 4.120
Stochastic end-user model for forecasting load statistics **Nassar, M K and Gruber, S** 8.182
Stochastic optimization and modelling of large hydrothermal systems for long-term regulation **Dillon, T S, Martin, R W and Sjelvgren, D** 2.2
Stochastic power flow using cumulants and Von Mises function **Sanabria, L A and Dillon, T S** 8.47
Switching as a means of control in the power system **Glavitsch, H** 7.92
Synthesis of excitation controllers for synchronous generators setting specified stability margins in the under-excited operating region **Brucoli, M, Maione, B and Torelli, F** 7.61
The Greta model: a decision-making tool for operation and planning of generation systems at EDF **Garabedian, V and Meslier, F** 1.83
Theoretical and practical dynamic equivalents in multimachine power systems. Part 1: Construction of coherency-based theoretical equivalent **Di Caprio, U** 4.224
Theoretical and practical dynamic equivalents in multimachine power systems. Part 2: Construction of practical equivalent **Di Caprio, U** 5.40
The variation of electricity prices in response to supply–demand conditions and devices for consumer interaction **David, A K, Nutt, D J, Chang, C S and Lee, Y C** 8.101
'To be or not to be modern' that is the question for automatic generation control (point of view of a utility engineer) **Carpentier, J** 7.81
Transactions between electric utility and photovoltaic owner **Yamayee, Z A and Peschon, J** 3.187
Transient analysis in a three-phase power line with an application of the method of characteristics **Zieliński, J S and Bruliński, P** 7.13
Transient characteristics of power cables: a new approach based on Poynting's theorem **Bajorek, J** 7.48
Transient response of a ferroresonant circuit **Elkamchouchi, H and Zaky, A A** 7.55
Transient stability index for online stability assessment and contingency evaluation **Ribbens-Pavella, M, Murthy, P G, Horward, J L and Carpentier, J L** 4.91
Transmission line models for line protection **Vitins, M** 2.35
Transportation problem as a model for optimal schedule of maintenance outages in power systems **Mromlinski, L R** 7.161
UHV shunt reactor for secondary arc extinction on multiphase reclosing **Sekine, Y and Kurihara, I** 5.247
Uncertainty in operational planning of power system generation **Glanc, Z** 2.81
Unified phase-coordinate load-flow and fault analyses of polyphase networks **Laughton, M A and Saleh, A O M** 2.181
Unit commitment in a thermal generation system with multiple pumped-storage power stations **Lidgate, D and Khalid, B M N** 6.101
USSR study of electrical transmission lines of increased capacity and reduced ecological influence **Astakhov, J N, Antonova, N P, Venikov, V A, Lyskov, J I, Postolaty, V M and Tchaly, G V** 3.45
What is diakoptics? **Klos, A** 4.192
Z-function convolution in EHV power network electromagnetic transient analysis **Humpage, W D, Wong, K P and Nguyen, T T** 5.31

adequacy-contingencies and voltage collapse, 1.175; 3.215; 4.162; 6.51
non-steady-state, models, surges, 1.193; 2.35; 3.154; 5.31; 6.203; 7.13, 48, 55, 120
state and parameter estimation, 1.187; 2.70, 123, 201; 4.169, 177; 6.75, 79, 195; 7.175; 8.236, 241
Network analysis cont.
steady-state
analysis (loadflow, fault), 1.175; 2.129; 3.65, 179; 4.233; 5.166, 247; 7.154, 253; 8.2, 11, 48
theory and modelling
decomposition, diakoptics, topology, 1.175; 2.58; 4.185, 192; 5.182; 8.213
inherent network structure, properties and equivalents, 1.30; 3.115; 4.265; 5.17, 22
polyphase network analysis, 2.43, 181, 193; 3.50; 4.120
Operation,
load dispatching (optimal loadflow, reactive power generation), 1.3; 2.129, 133; 3.59, 91; 4.142; 7.2, 138, 247; 8.115
long-term (generation planning energy management, maintenance scheduling), 1.83; 2.2; 4.11; 7.21, 101, 161; 8, 61, 66
short-term
load forecasting, 2.29; 5.189; 8.182
unit commitment generation planning, 2.81; 3.187; 4.111; 5.87; 6.101; 7.229
Planning,
distribution system, 1.35; 3.193; 4.129; 5.8, 173; 6.55
generation. 1.57; 2.87, 147; 3.159, 187; 4.42, 137, 155; 5.75, 121; 6.239; 7.21, 131, 201, 225; 8.61, 75, 168
reliability, 1.46, 95, 139; 2.161, 169; 5.94, 101, 149; 6.161; 8.168
transmission network, 2.103, 153; 3.2, 45, 167; 5.3; 6.72, 139
Surveys of power systems R & D, 1.65, 199; 4.2; 5.115; 6.112
